Map Concept Design By Yuyan Wu

Part 1 -3DModeling_Island

Details

Part 1-3DModeling_Island

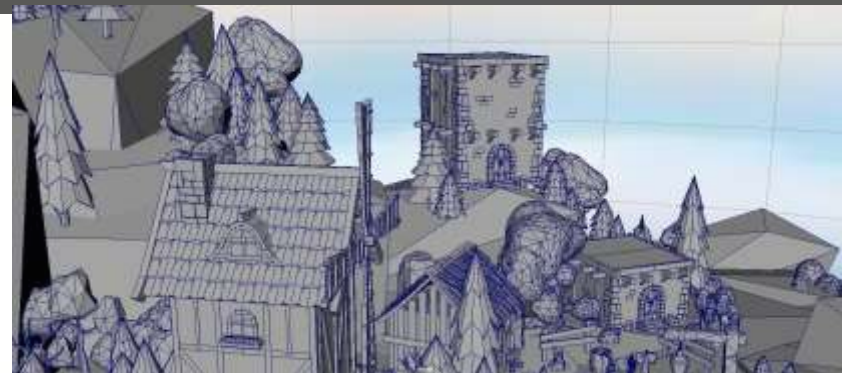

Below the lighthouse are a number of abandoned or functioning huts, with houses that rely on windmills for power.

Concept Design By Yuyan Wu

Part 1-3D Modeling_Basement

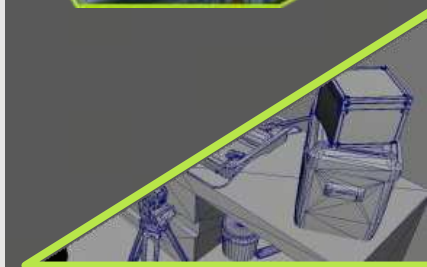

A basement under the farm, which houses a lot of fodder, farming tools, a few boxes for storing personal information and large supply motors, and most of all a lot of experimental apparatus and experimental chambers, is a key place for the game's plot twist, where everything helps the player to uncover the dark side behind the NPCs.

Part 1 -3DModeling_Fishing

Concept Design By Yuyan Wu

I wanted to design a fishing scene that could be used in the game. The model of this game is mainly low poly style, a bit cuter. This time I want to do some stylized hand-painted stickers, I hope it can be realized. The main models in the scene are fishermen, fishing rods, fish baskets, fish, umbrellas, and small ponds. Some stones, flowers and plants are placed in the scene as decorations.

Part 1-3DModeling_Doll

Concept Design By Yuyan Wu

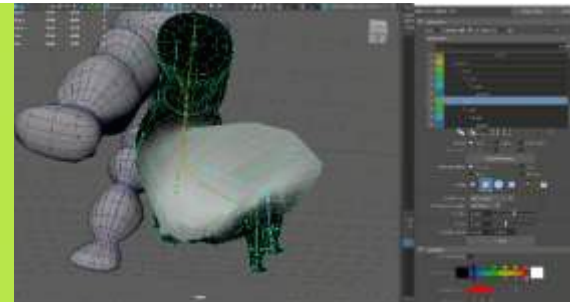

I used Maya, Substance Painter and ZBrush to make this girl. Based on my knowledge, I realized my own conceptual design with 3d models. And make a stylized map. I also carried out bone binding for the little girl, and changed the weight of the bones and skin to achieve the demonstration of the little girl's sitting posture.

Part 1-3DModeling_Umbrella, Creel

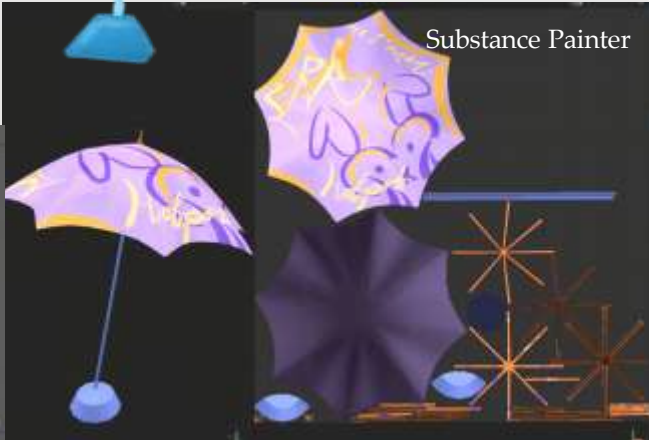

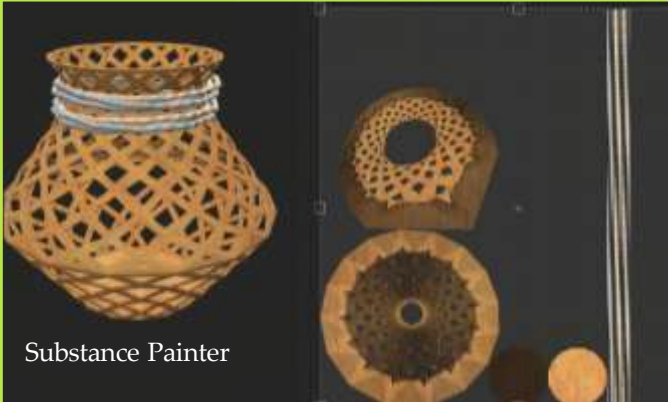

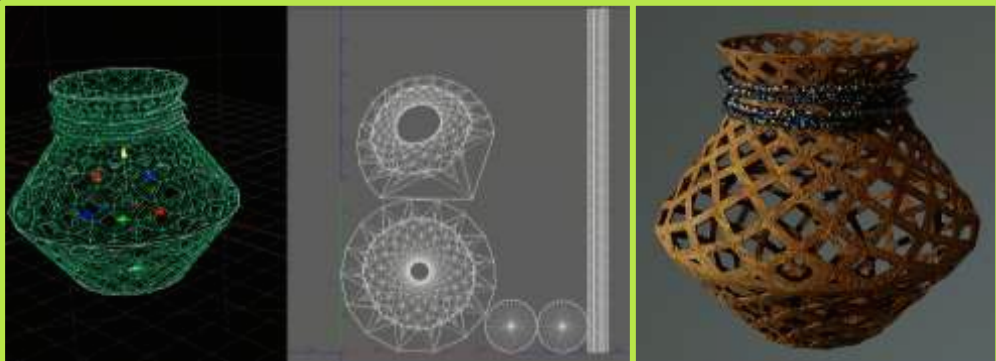

Concept Design By Yuyan Wu

To make the umbrella with Maya SP, I wanted the surface to be plastic, so only a little roughness was given.

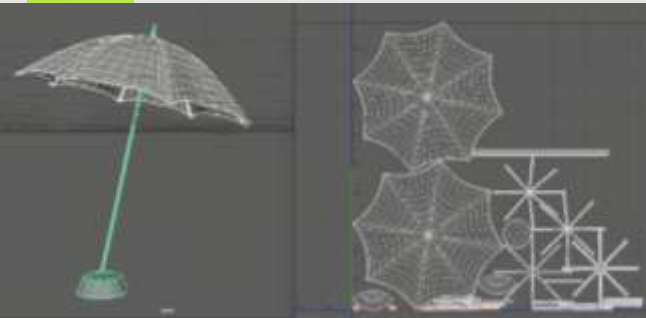

Use Maya, SP to make a fish basket, the body of the basket is made of bamboo and rattan, and twine is wrapped around the opening, making the twine white in order to distinguish the color.

Part 2 Board Game Design

Playgroup: 2-6 people

Background: Kaman University won the opening ceremony of the new semester, but as is the process, the President's message that followed did not come as promised, and the President who was supposed to appear on the podium did not appear. Instead a number of unidentified species have appeared in various corners of the school, and the mysterious man behind the scenes is blackmailing students over the radio to cooperate in the battle and either kill the monsters or die. Meanwhile students of different majors are assigned different skills. The mysterious man seems to be in no hurry to let the students die, instead he gives generous rewards for killing the monsters and he seems to be turning the school into a box full of killings for him to watch.

Victory conditions: Cooperate to clear the map of monsters and survive at least 1 character.

Failure conditions: All are dead, and the monster still exists

Gameplay Description: Randomly selected professions, initial player positions are determined by dice, randomly selected monsters, assigned monster positions (specific information on monsters is not disclosed before the battle), prop positions (specific information on props is not disclosed before opening, obtained through extraction), players combine their skills against monsters, dice determination, monsters become more and stronger as the number of people increases (2 people 4 monsters, 3 people 8 monsters, 4 people 12 monsters, 5 people 14 monsters, 6 players with 16 monsters)

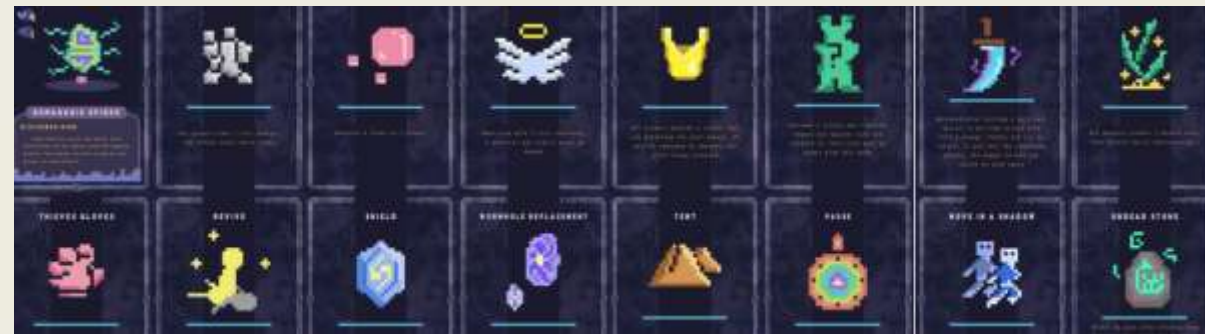

Table game improvements

1. The order in which players arrive at the monster grid is different, and there is no clear explanation of how players can work together against the monsters.

Responses: If a player gets within range first, they can either start fighting directly or wait for their teammates to enter the range before starting the fight. If one starts fighting directly, other players will join the fight when they enter the range.

2. During the testing phase, it was found that some characters died easily.

Responses: 1. Character-Designer, skill value change: clone (clone a character that exists on the field excluding this character, increase the chance to attack once per round for three rounds, the cloned character has 5 life and 1 action power, but cannot use props)

2. Character-Spacewalker, skill value change: Black Hole (Devour, effective at 6 points, can be judged each round and can be effective)

3. Fate cards are drawn once every two turns, but it is not stated whether the turn against the monster is counted.

Responses: When a player advances, he draws a fate card once every two turns; turns against monsters do not count towards this.

4. There is a bug that causes players to die instantly when facing monsters.

Responses: When a player is killed without having activated any skills, the player has a chance to revive all of them for a total of 5 action points, and the player is given one turn to determine the skill. If the decision is successful, it will take effect; if not, no negative results will occur.

The player can be revived during or after battle by spending 3 action points, the revived player has only 2 life points and 2 action points.

5. The back of the card is not very distinguishable, it is a bit difficult to distinguish.

Responses: Increase the colour contrast on the back, especially on the back of misfortune cards.

Part 2 –Board Game Design

Part 3 –Character Concept Design

Background:

One day orange raindrops suddenly fell from the sky. The plants that were watered by the raindrops began to mutate and some even began to have self-awareness to attack humans. Unknown people cut the plants with knives but were splashed by the liquid inside the plants and were soon parasitized by the plants. Some of them lost their self-will and began to attack indiscriminately, but others gained powers as a result. Those who gained powers formed an organization dedicated to protecting the normal people who were not parasitized, and fought fiercely against the plant people who had lost their will. Five of the best psychics managed five units: defence, assault, reconnaissance, support and guerrilla.

Assault Division

The character is inspired by the cactus. He is a somewhat obese but mobile character who likes to wear dresses and is a very elegant gentleman, with spikes that do a lot of damage and grow automatically, and he always uses flowers with a special smell to confuse his opponents.

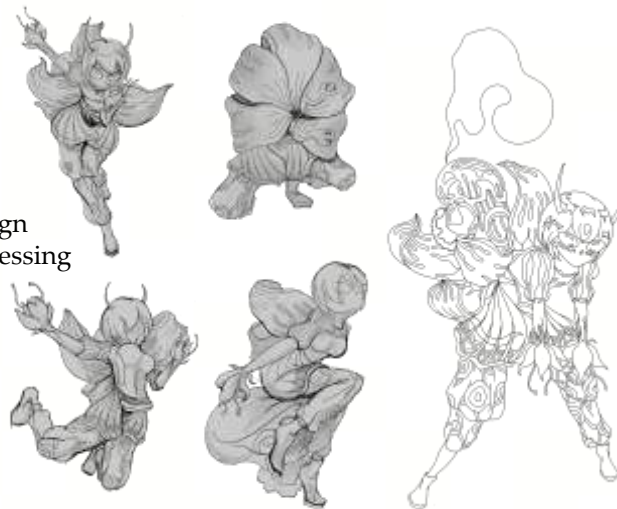

Design
processing

Guerrilla

The character is inspired by the butterfly orchid. The stamen of the butterfly orchid resembles a bee with pink petals and is small and light. The petals on its back can be stretched and brought together in all directions to form a small defensive shield, and the bee stamen on its back can release a mesmerising gas to stun enemies and can also hover out of its body, so the guerrilla section can also be considered half air force.

Part 3 –Character Concept Design

Design processing

Color key

Defence

The character is inspired by mushrooms on rocks, they have a variety of mushrooms with rock-hard backs that reflect attacks and poisonous mushrooms that release poisonous gas. The hands can be transformed into stone chains or walls at will for defence, but they are relatively slow compared to the other departments.

Scouting

The character is inspired by branches, which are brown in colour and hard enough to pierce objects, this section has long, retractable legs that allow them to look down on the battlefield from above and line up the best escape routes if necessary. They also have a telescopic stick in their hands, one side of which can be shifted to wrap around or pierce objects at will.

Color key

Design processing

Support Section

The character is inspired by the fulvous bamboo. It has a cannon of bamboo on its arm, which can be used to suppress fire when necessary, but it takes a long time to recover, so it is classified as a support, but a key sector to turn the tide. The petals of the bamboo have a healing effect and grow indefinitely, and they have the fastest mobility of the five branches, allowing them to support all departments quickly.
